To Whom It May Concern:

In the summer of 1994, Mercury Marine was faced with the challenge of cleaning a pond in Cedarburg, Wisconsin. The contaminant was PCB. The pond was approximately 900 feet in length and contained well over 2,000, 000 gallons of water. With the assistance of McMullen & Pitz, we were successful in our ability to drain the pond and excavate 7,000 yards of contaminated soil from the pond.

During the entire construction and remediation effort, there were a number of field engineering calls that had to be made for a project of this type. This was one of the first major excavation projects of this nature in the State of Wisconsin, and resources information was not available to assist in correcting problem areas associated with this project. McMullen & Pitz brought a very professional crew to the site to assist Mercury with this remediation project. I believe the people were very focused on their work and kept this project on track. They did not allow distractions from the outside to interfere with the overall objective of the program. I believe the people were very professional in their mannerism and dealing with general public and all regulators while they were on the site.

Overall, Mercury was very pleased and well satisfied with the effort McMullen & Pitz put into this project on behalf of Mercury Marine. I would endorse without any reservation McMullen & Pitz for assisting in similar remediation projects. Should one want to discuss further the qualifications of McMullen & Pitz, feel free to contact:
